

Polymer Manufacturing & Processing **Product Range**

DRIVING YOUR SUCCESS

United Initiators ("UI") is the largest, focused global producer of specialty chemical initiators and the only player worldwide providing a full range of both organic peroxides and persulfates (inorganic peroxides). We are the leading manufacturer of persulfates and among the top three suppliers of organic peroxides worldwide. Our network allows us to serve our customers both on a local and global scale. Supply reliability and quality are critical when it comes to peroxides and this is one of the key factors why customers choose United Initiators.

Our products are essential ingredients for many applications and products in our daily life and are necessary to produce a large range of polymers and polymer-based materials. The application of our products goes well beyond polymers. They are used in consumer areas such as hair bleaching, disinfection, denture cleansing and tooth whitening. Industrial applications include etching of printed circuit boards, chemical synthesis, oil & gas exploration, soil remediation and many more. Continuous improvement and innovation on all levels enables us to effectively respond to changing and growing market needs.

Safety is a very crucial factor to be successful in our industry. United Initiators adheres to highest safety standards in production and the entire supply chain. We offer all our customers in-depth service and training to handle our products in a safe and efficient manner. In our daily global operations our continuous focus is on maintaining high environmental standards. Sustainability is another focal point within our organization and we are committed to optimizing our processes and enhancing our energy efficiency.

It is among our primary goals to serve our customers with products of consistent quality and highly reliable services. We continuously optimize our operations and supply chain to assure high safety and overall reliability. Our global footprint allows us to offer services both to regional and global customers in an effective manner.

Locations

United Initiators is a global company with headquarters in Pullach/Germany and operations in various sites in North America, Asia and Australia.

A Leading Peroxide Producer - Serving a Growing World

More than 100 years of experience make us the leading global provider of organic peroxides, persulfates and specialty products. The company's history has been marked by constant and sometimes profound changes: through mergers, acquisitions and joint ventures as well as through market and product development. This has created United Initiators, the globally leading manufacturer fully focused on peroxides. Our strong position makes us the right partner to "drive your success".

2020 PeroxylChem

Acquisition of H₂O₂ plant in Canada

2019 HP

Acquisition of Hidrojen Peroksit

2018 VR

Joint Venture with VR Persulfates

2016 Equistone

Equistone acquires majority stake

2012 Syrgis

Acquisition of Syrgis

2008 United Initiators

2007 Evonik Industries

2001 degussa.

Degussa acquires Laporte

1994 AZTEC

Laporte acquires Aztec Catalysts

1968 Peroxid-Chemie

1961 Laporte Organics

1911 Elektrochemische Werke München

1909 Patent for the production of Hydrogen Peroxide

1911 Foundation of Elektrochemische Werke Adolph & Pietzsch

1928 Merck AG becomes shareholder. Conversion into EWM AG

1930's Inorganic Peroxide production

1935 Breakthrough: Concentration of Hydrogen Peroxide solutions up to 81%, fuel for submarines and aero planes

1936 Production of sodium percarbonate begins

1938 Production of carbamide peroxid

1944 80% of the Pullach plant destroyed in an air-raid

1954 Entry into the field of organic chemistry (Organic Peroxides)

1961 Takeover by Laporte Industries, new Hydrogen Peroxide process

1970 Joint Venture of Laporte and SOLVAY forms Interrox

1992 Demerger of the Interrox Group, Peroxid-Chemie becomes again a 100% Laporte subsidiary
2001 Takeover of Laporte by Degussa

2004 Peroxid-Chemie becomes Degussa Initiators

2007 Degussa becomes Evonik Industries

2008 Sale to Speyside Equity. Birth of United Initiators

2012 Acquisition of Syrgis Performance Initiators

2016 Equistone acquires majority stake alongside current management

2018 Joint Venture of United Initiators and VR Persulfates

2019 Acquisition of Hidrojen Peroksit in Turkey

2020 Acquisition of the Hydrogen Peroxide plant from Evonik Industries in Canada

HEALTH, ENVIRONMENT AND SUSTAINABILITY*

Priority for ESHQ

Environmental protection, safety, health, quality (ESHQ) and long-term profitability are essential and equally important conditions for the survival and the successful development of our company. However, in certain acute situations environmental protection, safety, health, quality will always take precedence over efficiency. These corporate objectives are not mutually exclusive but complementary. Sound future planning includes environmental, energy-efficient and economic considerations and therefore we will continually develop and balance these dual considerations.

Environmental Protection

Environmentally-friendly production and processes are prerequisites for the long-term preservation of the United Initiators' sites. We are committed to acting in a future-orientated and sustainable manner within the meaning of the Responsible Care Program for the chemical industry. United Initiators is certified in accordance with DIN EN ISO 14001 both to address any possible environmental consequences and to ensure the continuous improvement of environmental protection. The local employees or their representatives are actively involved in the definition of environmental programs and objectives according to the local requests.

OUR VALUES

Respectful
Entrepreneurial
Safety-focused
Professional
Engaged
Customer-focused
Transparent

OUR VALUES, OUR VISION & OUR MISSION

OUR VISION

The leading initiators producer serving a growing world!

OUR MISSION

Satisfy customer needs with reliable service!

NPS/SPS						1.000 kg super sacks	>170/338	-	-	30/86	●									

Safety Information

Half-life

Peroxide decomposition rates are commonly reported in terms of half-life time or when 50% of the peroxide has decomposed at a certain temperature. Recommended organic peroxide heat temperatures commonly reflect the half-life time at 10 hours, 1 hour and 1 minute. The higher the half-life temperature, the more stable the peroxide. Half-life temperatures can vary based on formulations and solvents.

Using the Arrhenius equation, acronyms related to halflife time include:

$$k_d = A \cdot e^{-EA/RT} \text{ and } t_{1/2} = \ln 2/k_d$$

k_d : Rate constant of the peroxide dissociation

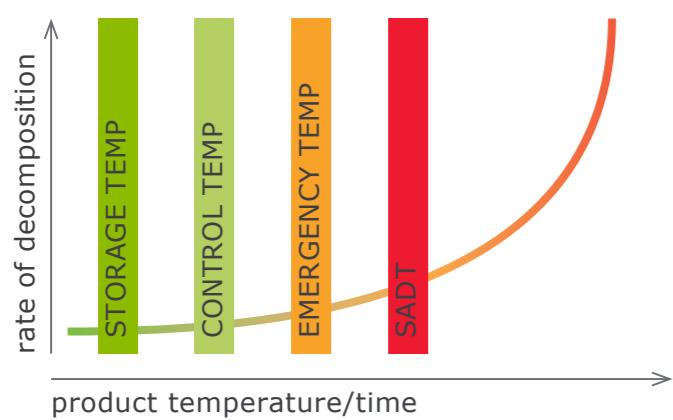

A: Arrhenius frequency factor

EA: Activation energy for the dissociation

R: Ideal gas constant

T: Temperature

$t_{1/2}$: Half-life time

Controlling the temperature is the most important constant. If the temperature is maintained well below its self-accelerating decomposition temperature (SADT), most hazards are avoided when shipping, handling or storing. For storage over a longer period of time, follow the manufacturer's temperature recommendations.

Self-Accelerating Decomposition

Temperature (SADT)

The SADT is the lowest constant temperature for self-accelerating decomposition when transporting packaged peroxides. At the SADT, when elevated heat temperatures from decomposition exceed the heat loss, over time, the peroxide's temperature increases and it decomposes faster or self-accelerates. The final decomposition may be uncontrollable.

Minimum/Maximum Recommended Storage Temperature

The maximum recommended storage temperature is lower than the control temperature for quality assurance purposes not safety. Keep in mind, some liquid or paste organic peroxides must not be stored below a certain minimum temperature as turbidity, phase separation, crystal deposits or solidification can occur.

Control Temperature (Tc)

The Tc is the maximum transportation temperature recommended for the product's estimated time of arrival. Tc is not required if the SADT exceeds 50°C (122°F). Generally, the Tc mirrors SADT canister guidelines.

$T_c = SADT - 20^\circ\text{C}$ if $SADT < 20^\circ\text{C}$

$T_c = SADT - 15^\circ\text{C}$ if $SADT < 35^\circ\text{C}$

$T_c = SADT - 10^\circ\text{C}$ if $SADT < 50^\circ\text{C}$

SADT transportation temperatures are based on recommendations by the UN Committee of Experts on the Transportation of Dangerous Goods.

Emergency Temperature (Te)

The control temperature Tc is supplemented by an emergency temperature, Te, which is higher than the Tc but still well below the SADT. The Tc may be exceeded if maintenance is necessary or until alternative cooling such as dry or wet ice is available. However, if the Te is reached, emergency procedures must be implemented immediately – for instance, cooling down the organic peroxides.

Product Code	Chemical Name	Storage Temperature	EA [kJ/mol]	Half Life [°C]		
				10 h	1 h	1 min
IBP	Diisobutyl peroxide	●	110	23	39	73
CUPND	Cumyl peroxyneodecanoate	●	115	38	55	90
TOPND	1,1,3,3-Tetramethylbutyl peroxyneodecanoate	●	117	40	57	92
TAPND	tert-Amyl peroxyneodecanoate	●	113	44	62	100
CEPC	Dicetyl peroxydicarbonate	●	124	41	57	90
MYPC	Dimyristyl peroxydicarbonate	●	124	41	57	90
SBPC	Di-sec-butyl peroxydicarbonate	●	120	41	57	90
EHPC	Di-2-ethylhexyl peroxydicarbonate	●	121	47	64	83
TBPND	tert-Butyl peroxyneodecanoate	●	121	47	64	100
BCHPC	Di-4-tert-butylcyclohexyl peroxydicarbonate	●	129	48	64	82
NBPC	Di-n-butyl peroxydicarbonate	●	130	49	65	99
TBNH	tert-Butyl peroxyneohexanoate	●	116	51	69	107
TAPPI	tert-Amyl peroxypropionate	●	121	53	71	110
DCLBP	Di-2,4-dichlorobenzoyl peroxide	●	121	54	72	110
TBPP1	tert-Butyl peroxypropionate	●	121	56	74	110
INP	Di-3,5,5-trimethylhexanoyl peroxide	●	117	59	78	120
DP	Didecanoyl peroxide	●	126	62	80	120
LP	Dilauroyl peroxide	●	126	62	80	120
AIBN	2,2'-Azobis(isobutyronitrile)	●	130	62	80	120
DHPEH	2,5-Dimethyl-2,5-di(2-ethylhexanoylperoxy) hexane	●	137	67	84	125
PMBP	Di-4-methylbenzoyl peroxide	●	125	70	89	130
BP	Dibenzoyl peroxide	●	126	72	91	130
TAPEH	tert-Amyl peroxy-2-ethylhexanoate	●	126	72	91	130
TBPEH	tert-Butyl peroxy-2-ethylhexanoate	●	135	74	92	130
TBPIB	tert-Butyl peroxyisobutyrate	●	130	77	96	135
TBPM	tert-Butyl monoperoxy maleate	●	116	82	104	150
ACH	1,1-Di(tert-amylperoxy)cyclohexane	●	135	87	106	152
MIKP	Methyl isobutyl ketone peroxide	●	125	90	110	155
TAPEHC	tert-Amylperoxy-(2-ethylhexyl)carbonate	●	151	95	113	150
TMCH	1,1-Di(tert-butylperoxy)-3,5,5-trimethyl-cyclohexane	●	143	95	114	155
CH	1,1-Di(tert-butylperoxy)cyclohexane	●	138	97	117	160
TBPIC	tert-Butyl peroxyisopropyl carbonate	●	138	97	117	160
TBPIN	tert-Butyl peroxy-3,5,5-trimethylhexanoate	●	147	100	119	160
TBPEHC	tert-Butyl peroxy-2-ethylhexyl carbonate	●	128	100	122	175
TBPA	tert-Butyl peroxyacetate	●	149	102	121	160
TAPB	tert-Amyl peroxybenzoate	●	143	102	122	160
TBPB	tert-Butyl peroxybenzoate	●	143	104	124	165
BU	2,2-Di(tert-butylperoxy)butane	●	143	104	124	165
NBV	n-Butyl-4,4-di(tert-butylperoxy)valerate	●	141	110	131	175
EBU	Ethyl-3,3-di(tert-butylperoxy)butyrate	●	144	114	135	180
DCUP	Dicumyl peroxide	●	152	116	136	175
BCUP	tert-Butyl cumyl peroxide	●	154	118	138	180
DTAP	Di(tert-amyl) peroxide	●	129	118	142	190
DIPP	Di[2-(tert-butylperoxy)-isopropyl]benzene	●	142	120	142	190
DHBP	2,5-Dimethyl-2,5-di(tert-butylperoxy)hexane	●	142	120	142	190
DTBP	Di(tert-butyl) peroxide	●	152	125	146	190
DYBP	2,5-Dimethyl-2,5-di(tert-butylperoxy)hexyne-3	●	154	128	149	195
CUHP	Cumyl hydroperoxide	●	133	140	166	223
TBHP	tert-Butyl hydroperoxide	●	149	173	200	260
CUROX®CC-DC	2,3-Dimethyl-2,3-diphenylbutane	●	195	210	234	285
