NOROX®500-90-AL3
1,1-Bis(tert.butyl peroxy)3,3,5-trimethyl cyclohexane
CAS#6731-36-8
Molar mass: 302.4 g/mol
90% Solution in aliphatics

Structural Formula

Description
Colourless, mobile liquid, consisting of 90% 1,1-Bis(tert.butylperoxy)3,3,5-
trimethyl cyclohexane, desensitised with aliphatic hydrocarbons. This cyclo-
aliphatic perketal is used as an initiator (radical source) for the polymerisation
of monomers (e.g. styrene) as well as in the curing of unsaturated
polyester resins and the crosslinking of polymers.

This product is in compliance with the Elektro G

Half-life Data

10 h/1 h/1 min (0.1 m/isododecane): 95 / 114 / 155 °C
Application

ETHYLENE:
Initiator for the high pressure polymerisation of ethylene in combination with other peroxides of varying degrees of activity.
Temperature range: 200-250°C.
Particular advantages: Liquid, even at low temperatures and high pressures. Not sensitive to other components in the polymerisation process.

STYRENE:
Initiator for the polymerisation of styrene in bulk or solution and copolymerisation with other monomers, such as Butadiene and Acrylnitril.
Temperature range: 100-140°C.
Usage level: 0.02-0.1% as supplied.
Particular advantages: reduced residual monomer contents, no reaction with chain-modifiers (e.g. mercaptans), no hydrolysis in alkaline media. We recommend the combination with more active peroxides, e.g. Dibenzoyl peroxide or tert.butyl per-2-ethylhexanoate.

OTHER MONOMERS:
Initiator for the polymerisation of vinyl acetate and (meth)acrylates.
Temperature range: 90-130°C.
Usage level: 0.05-1% as supplied.

Further information on suitable initiators for the polymerisation of monomers is given in our application brochures on this subject.

Standard Packaging
25kg in HDPE canister
